

Industrial Cooling Fan for Thermal Management

This high-performance cooling fan is designed for optimal thermal management in various industrial and electronic applications. Featuring a durable construction and aerodynamically optimized blade design, it delivers high airflow and static pressure while maintaining low noise levels.

Overview

High-Performance Thermal Management

This industrial-grade cooling fan is engineered for optimal thermal management across a wide range of electronic and industrial applications. It features an aerodynamically optimized blade design that delivers high airflow and static pressure while maintaining minimal noise levels. Designed for long-lasting reliability, it ensures the stable operation of critical components in demanding environments such as power supplies and heavy-duty industrial machinery.

Performance

Performance Highlights

1 High

High Airflow Capacity

1 High

Static Pressure

Technical Features

Key Features

- Aerodynamically optimized blade geometry
- Durable industrial construction
- Low-noise operation profile
- High thermal dissipation efficiency

Primary Applications

Power Supplies, Industrial Equipment, Electronics Cooling
