

Industrial Cylindrical Tank

These industrial cylindrical tanks feature rounded tops and conical bottoms. They are supported by legs and suitable for various manufacturing applications.

Overview

Industrial Cylindrical Tank

This industrial cylindrical tank is engineered for heavy-duty storage and processing applications. Featuring a robust design with a rounded top and a conical bottom, it is optimized for efficient drainage and material handling in demanding industrial environments. The unit is supported by a sturdy leg structure, ensuring stability and ease of integration into existing facility layouts.

Design & Construction

Tank Shape	Cylindrical with conical bottom
Material Composition	Metal, Stainless Steel/Coated Steel
Support Type	Integrated leg support system

Features

Key Features

- Rounded top design
- Conical bottom for efficient discharge
- Reinforced welding seams
- Multiple connection ports
