

Industrial Diesel Engine R6105AZLD

This robust diesel engine is designed for various industrial applications. The four-stroke, water-cooled engine features direct injection for efficient combustion and reliable performance.

Product Overview

Industrial Power Solution

The R6105AZLD is a robust four-stroke, water-cooled diesel engine specifically designed for demanding industrial applications. Engineered for durability and a long service life, it features direct injection for highly efficient combustion and consistent power delivery. With a focus on maintenance accessibility and a suite of reliable auxiliary systems, this engine provides a versatile and dependable power source for various professional environments.

Technical Specifications

Cooling Method	Water-cooled
Combustion System	Direct injection
Engine Cycle	Four-stroke

Key Components

Integrated Systems

- High-capacity air filtration
- Gear-driven water pump
- Robust lubrication system

Design Advantages	Easy Maintenance, Component Accessibility, Durable Construction
