

Industrial Diesel Generator Set

This generator set is designed for industrial and commercial applications, providing a stable power source. It features a heavy-duty diesel engine and a high-efficiency alternator, complete with a control panel and safety features.

Overview

Industrial Power Solutions

This industrial diesel generator set offers a versatile power output range from 7KW to 2000KW, designed to provide reliable energy for diverse commercial and industrial applications. Engineered for durability and high performance, the unit features an independent direct fuel injection system that ensures efficient combustion and low power consumption. Each unit undergoes rigorous testing procedures, including full load and safety testing, to guarantee consistent operation and minimal failure rates in emergency standby or continuous power scenarios.

Technical Specifications

Power Output Range	2000 KW
Output Voltage	380V/220V
Frequency	50 Hz
Electrical Configuration	Four phase three wire, neutral point grounding
Standards Compliance	NEMA, IP21

Performance Features

Performance Highlights

1 Direct
Fuel Injection

21 IP
Protection Class

Operational Benefits

- High quality, reliable power output
- Simple structure with low failure rate
- Efficient combustion system
- Easy start for emergency standby
- Wide operating temperature range
