

Industrial Electric Check Valve

This industrial check valve controls fluid or gas flow in pipelines. It ensures unidirectional movement, preventing backflow in industrial applications.

Product Overview

Industrial Electric Check Valve

This industrial check valve assembly is engineered for precise control of fluid or gas flow in demanding environments. Featuring a robust orange housing and a high-performance internal rotating blade, it ensures unidirectional movement and effectively prevents backflow. The unit is powered by a reliable yellow electric motor, making it a critical component for automated industrial piping systems.

Technical Specifications

Actuation	Electric Motor
Valve Type	Check Valve
Mounting	Circular Flange

Features

Application Suitability

- Fluid flow control
- Gas flow management
- Industrial piping systems

Key Features

Unidirectional Flow Control, Backflow Prevention, Industrial Grade, Robust Housing
