

Industrial Electric Motor

This high-efficiency electric motor is designed for industrial applications. It features a durable cast iron frame and cooling fins for heat dissipation, ensuring reliable performance under heavy loads.

Overview

High-Efficiency Industrial Motor

This industrial electric motor is engineered for reliability and performance in demanding environments, including petroleum equipment and heavy machinery. It features a robust cast iron frame designed to minimize vibration and maximize durability during continuous operation. With integrated cooling fins for superior heat dissipation and a secure terminal box for streamlined electrical connections, this unit ensures safe and efficient power delivery under heavy loads.

Physical Characteristics

Housing Material	Cast Iron
Cooling System	Integrated cooling fins
Safety Features	Protective fan cover, Vibration resistant, Terminal box

Application

Suitable Industries

- Petroleum equipment
- General industrial machinery
