

Industrial Electrical Control Panels

These electrical control panels are designed for power distribution and industrial control systems. The panels feature multiple indicator lights and switches housed in interconnected cabinets.

Product Overview

Industrial Control & Distribution Systems

These industrial electrical control panels are designed for robust power distribution and system control in demanding commercial or industrial environments. Featuring a modular cabinet architecture, the system integrates multiple indicator lights, safety switches, and control interfaces to ensure reliable operation. The durable construction is optimized for heavy-duty applications requiring centralized electrical management.

Technical Specifications

System Configuration

- Interconnected cabinet architecture
- Integrated indicator light arrays
- Manual control switch interface
- Power distribution capability

Design Features

Modular Design, Industrial Grade, Control System Integration

Color Scheme

Teal base with light gray body
