

Industrial Evaporative Humidifier Cooler

This evaporative humidifier cooler is designed for industrial and commercial applications. It utilizes a rigid media evaporative pad system within a galvanized steel frame for efficient cooling and humidification.

Overview

Industrial Evaporative Humidifier & Cooler

This industrial evaporative humidifier and cooler provides a highly energy-efficient solution for climate control in large-scale commercial and industrial environments. Engineered for precision, it offers exceptional humidity control accuracy and utilizes advanced inorganic media to ensure safety and hygiene without the need for complex water treatment. Its compact, low-pressure-drop design minimizes operational costs while maximizing performance across a wide range of airflow capacities.

Performance Specifications

Power Consumption

50 W

Min Power

250 W

Max Power

Efficiency Levels

- 65%
- 85%
- 95%

Airflow Capacity	0.5 to 34 m ³ /s (single unit)
-------------------------	---

Humidity Control Accuracy	±1%
----------------------------------	-----

Operational Features

Evaporative Media	Inorganic, non-combustible material
--------------------------	-------------------------------------

Water Treatment Required	No
---------------------------------	----

Certifications

Compliance & Standards	ISO 9001, ISO 14001
-----------------------------------	---------------------
