

Industrial Fiber Laser Cutting Machine

This high-precision fiber laser cutting machine is designed for industrial applications. It offers advanced cutting capabilities for various materials, ensuring clean cuts and efficient production.

Overview

Industrial Fiber Laser Cutting Machine

This industrial fiber laser cutting machine features a robust Longmen dual bed structure with high-strength, lightweight pillars, designed to handle materials ranging from thin to thick with precision. It integrates advanced biaxial equal optical path technology to ensure uniform, stable laser beam processing across the entire working area. Equipped with an imported laser generator and an intelligent digital control system, it delivers significantly improved processing efficiency and high-quality cutting sections.

Technical Specifications

Structure Type	Longmen dual bed structure
Optical Path Technology	Biaxial equal optical path
Control System	International brand digital control and drive system

Features

Model Identifiers

3015 • HN-3015 • HN-3005

Key Capabilities

Automatic exchange workbench, Humanized operation interface, Safety protection, Optimized parameter library
