

Industrial Filter Fan Unit

This filter fan is designed for industrial and machinery applications, particularly in apparel and textile manufacturing. It provides ventilation and filtration to protect internal components from dust and debris.

Overview

Industrial Ventilation Solution

The JLVFP-805-110 is a specialized filter fan unit engineered for industrial machinery and textile equipment. It provides essential ventilation and advanced filtration to protect sensitive internal components from dust, debris, and particulate matter. By maintaining a clean operating environment, this unit significantly enhances equipment longevity and ensures consistent performance in demanding industrial settings.

Technical Details

Model Number	JLVFP-805-110
Primary Application	Apparel and Textile Machinery

Features

Key Design Features

- Louvered front cover for optimized airflow
- Integrated filter element for particulate capture
- Designed for easy installation
- Simplified maintenance access

Protection Capabilities	Dust Protection, Debris Filtration, Component Longevity
