

Industrial Filtration Cylinder

This cylindrical industrial component is likely part of a filtration or separation system. It features a metallic body with composite attachments and a circular port, suggesting it is designed for fluid or gas transfer.

Product Overview

Industrial Filtration Cylinder

This industrial filtration cylinder is engineered for high-performance fluid or gas processing applications. Featuring a robust metallic body with durable composite end caps, it is designed to handle demanding industrial or laboratory environments. The unit includes an integrated lifting handle for easy transport and a stable mounting base for secure installation, making it an essential component for complex separation systems.

Physical Characteristics

Design Features

Metallic Body, Composite End Caps, Integrated Lifting Handle, Mounting Base

Operational Details

Primary Applications

- Industrial filtration
- Separation systems
- Fluid transfer
- Gas transfer
- Laboratory processing

Connection Port

Side-mounted circular port
