

Industrial Flour Milling Machine

This flour milling machine is engineered for efficient grain processing. It features a multi-stage system with a robust steel frame and pneumatic conveying for material transfer.

Overview

Industrial Flour Milling System

This small-scale, high-efficiency flour milling machine utilizes an advanced automatic feeding system and pneumatic conveying for superior processing. Designed for versatility, it effectively handles wheat, maize, and rice, utilizing a roller mill and flour brusher to produce exceptionally fine results. With its low investment requirement and energy-efficient design, this system is the ideal choice for small-scale industrial production environments.

Technical Specifications

Available Models

- 6F2240
- 6F2250
- 6F2260

Key Features

Automatic Feeding • Air Conveying • Roller Milling • Integrated Flour Brushing

Supported Materials

Wheat, Maize, Rice, Broken Rice
