

Industrial Flour Milling Machine

This industrial flour milling machine is engineered for efficient grinding of grains into flour. The system integrates sifters, grinders, and conveyors to optimize flour quality and yield.

ADDITIONAL IMAGES

Overview

Industrial Flour Milling Solutions

This industrial-grade milling system is designed for large-scale grain processing, including wheat, maize, and corn. The equipment features a multi-level structure with integrated roller mills, sifters, and pneumatic conveying systems to ensure a continuous, automated production process. Engineered for durability and efficiency, the system offers adjustable grinding parameters to optimize flour quality, yield, and consistency for commercial food processing operations.

Capabilities

Output Products

- Flour
- Semolina
- Maize Grits

Supported Grains

Wheat, Maize, Corn

Technical Features

Key Components

- Roller Mills
- Sifters
- Pneumatic Conveying System
- Automated Control System

Operational Benefits

Automated Process • Adjustable Grinding • High Throughput • Energy Efficient

Service & Support

Service Terms

Service Type	Details
Project Scope	Turnkey project (design, installation, commissioning, training)
Warranty Period	1 Year
Spare Parts	1 Year free spare parts included
Maintenance	Lifelong service
