

Industrial Fluid Distributor Basket

This distributor basket is a component used in industrial applications involving filtration or separation processes. It is designed to evenly distribute fluids or materials within a system, preventing clogging or uneven distribution.

Product Overview

Industrial Fluid Distributor Basket

This industrial-grade distributor basket is engineered for uniform water distribution within filtration and separation systems. Constructed from durable, corrosion-resistant ABS material, it ensures reliable performance in demanding environments like water treatment facilities and chemical processing plants. Its specialized design facilitates optimal fluid flow while effectively capturing particulate matter to maintain system integrity.

Technical Specifications

Available Sizes

- 1.5"
- 1"
- 3/4"

Material	ABS
Suitable Applications	Water Treatment, Hydraulic Systems, Chemical Processing, Filtration Systems
