

Industrial Fluid Transfer Centrifugal Pump

This centrifugal pump is designed for fluid transfer in industrial settings. It features a volute casing, impeller, and shaft, driven by an electric motor.

Product Overview

Industrial Fluid Transfer Centrifugal Pump

This horizontally-mounted centrifugal pump is engineered for reliable fluid transfer in demanding industrial environments. Featuring a robust volute casing, precision-engineered impeller, and a sturdy base, it ensures stable operation and minimal vibration. The unit is designed for secure integration into piping systems via flanged connections, making it an efficient solution for various fluid handling processes.

Technical Specifications

Mounting Configuration	Horizontal
Drive System	Electric motor coupled to pump shaft

Construction & Design

Key Construction Features

- Volute casing
- Impeller
- Protective coupling guard
- Sturdy vibration-dampening base
- Flanged connections

Connection Type

Flanged
