

Industrial Fuel Transfer Pump

This industrial pump is designed for transferring gasoline and similar fluids. It features a robust design with flanged connections and a sturdy base for stability.

Product Overview

Industrial Fuel Transfer Solution

This industrial-grade fuel transfer pump is engineered for reliable, high-volume fluid movement in demanding environments. Featuring a robust rotary gear pump coupled with a heavy-duty electric motor, the system is designed to handle gasoline and similar volatile fluids with precision. The unit is mounted on a vibration-dampening base frame, ensuring long-term operational stability and safety in industrial settings.

Technical Specifications

Pump Type	Rotary Gear Pump
Motor Configuration	Horizontally mounted electric motor
Connection Type	Flanged connections
Compatible Fluids	Gasoline, Gas, Industrial Fluids

Design & Build

Key Features

- High-pressure capability
- Industrial-grade durability
- Stable mounting system

Base Construction	Sturdy base frame with vibration dampening
