

Industrial Gasoline Engine

This high-performance gasoline engine is designed for various industrial and machinery applications. Its robust construction ensures durability and efficient operation for demanding tasks.

Overview

Industrial Gasoline Engine Series

This series of high-performance industrial gasoline engines is designed for reliable power across various machinery applications, including generators, water pumps, and tillers. Engineered with durability in mind, these units feature robust construction and efficient combustion systems to ensure longevity in demanding environments. With options ranging from 5.5HP to 15HP and support for both recoil and electric starting systems, these engines provide versatile solutions for diverse power equipment needs.

Performance Specifications

Engine Performance Comparison

Model	HP	Displacement	Max Output (kW/rpm)
GP160	5.5	163	4.0/3600
GP200	6.5	196	4.8/3600
GP270	9	270	6.7/3600
GP340	11	337	8.2/3600
GP390	13	389	10/3600
GP420	15	420	11/3600

Technical Details

Fuel Tank Capacities

- 3.6L (GP160, GP200)
- 7L (GP270, GP340, GP390, GP420)

Starting Systems

Recoil Start, Electric Start

Physical Dimensions

Gross Weight Range

17 kg

Minimum Weight

35 kg

Maximum Weight
