

Industrial Gasoline Transfer Pump

This is a heavy-duty industrial pump for gasoline and gas transfer. It is equipped with a large electric motor, gear mechanism, and valve assembly for high-volume pumping.

Overview

Industrial Gasoline Transfer Pump

This heavy-duty industrial pump is engineered specifically for the efficient transfer of gasoline and other gas-based fluids. Built with a robust construction, it features a large electric motor, a high-performance gear mechanism, and a reliable valve assembly. Designed for high-volume industrial settings, it includes a manual handwheel to ensure precise flow control during operation.

Technical Specifications

Key Components

- Large electric motor
- Robust gear mechanism
- Integrated valve assembly
- Manual handwheel

Build Quality

Heavy-duty • Industrial-grade

Application

Gasoline Transfer, Industrial Use, High-Volume Pumping

Control Method

Manual handwheel for precise control
