

Industrial Gate Valve for Fluid Control

This gate valve is designed to control the flow of fluids in industrial applications. It features a handwheel for manual operation and flanges for connection to piping systems.

Overview

Industrial Gate Valve for Fluid Control

This heavy-duty industrial gate valve is engineered for precise fluid control in demanding piping systems. Featuring a robust design with a manual handwheel and standard flange connections, it ensures reliable shut-off and flow regulation. Built for durability, this valve is an essential component for maintaining efficiency and safety in industrial fluid management applications.

Design & Construction

Key Components

- Red internal disc
- Manual handwheel
- Flanged body

Operation Type	Manual
Control Mechanism	Handwheel
Connection Type	Flanged

Application

Primary Application	Fluid Control, Industrial Piping, Flow Regulation
