

Industrial Gate Valves for Fluid Control

Industrial gate valves control fluid flow within pipelines. These valves feature flanged ends for secure connections and are suitable for various industrial applications.

Product Overview

Industrial Fluid Control Solutions

These industrial gate valves are engineered for reliable fluid control in demanding pipeline environments. Featuring robust construction and standard flanged ends, they provide secure and durable connections for large-scale infrastructure projects. Designed for mass-production consistency, these valves ensure uniform performance across complex piping systems.

Technical Specifications

Nominal Size	12 inches
Pressure Rating	600 LB
Material Grade	WCB
Batch Identification	1280003

Features

Connection Type	Flanged Ends
Suitable Applications	Pipeline Flow Control, Industrial Fluid Systems, Infrastructure
