

Industrial Gear and Transmission Components

These industrial components facilitate mechanical power transmission in a variety of machines. They include assorted gears and transmission parts of different sizes and finishes.

Product Overview

Industrial Gear and Transmission Components

This comprehensive collection of industrial gear and transmission components offers a wide range of mechanical solutions for diverse engineering applications. The assortment includes precision-machined cylindrical blocks, rods, and circular discs, manufactured from high-quality metal alloys to ensure durability and performance. Designed for versatility, these components are suitable for various transmission systems, providing reliable power transfer and mechanical efficiency in industrial settings.

Technical Specifications

Available Component Types

- Cylindrical blocks
- Cylindrical rods
- Circular discs

Size Variation

Small Diameter • Medium Diameter • Large Diameter

Surface Finishes

Matte, Reflective/Polished
