

Industrial Gear and Transmission Components

These components facilitate mechanical power transmission in machinery. The assortment includes bevel gears, spur gears, and other elements for constructing complex gearboxes and differential assemblies.

Product Overview

Industrial Transmission Solutions

These industrial gear and transmission components are engineered for high-performance mechanical systems, including differential and gearbox assemblies. The kit features a comprehensive assortment of bevel gears, spur gears, and precision washers designed for optimal load distribution and reliable power transmission. Crafted from durable metal alloys with a machined finish, these parts ensure long-lasting service in demanding industrial environments.

Technical Specifications

Included Components

- Bevel Gears
- Spur Gears
- Differential Cross
- Precision Washers

Application Suitability

Differential Assembly • Gearbox Systems • Mechanical Power Transmission

Material & Finish

Steel Alloy, Machined Finish, Industrial Grade

Component Variety

4 types
