

Industrial Gearbox for Metal Forming Machines

This industrial gearbox is engineered for metal forming machinery. It features a durable casing and splined output shaft for transmitting high torque in demanding metalworking applications.

Overview

Heavy-Duty Industrial Gearbox

This industrial gearbox is purpose-built for the rigorous demands of metal forming machinery. Designed with a robust blue casing, it ensures durability and consistent performance in casting and forging environments. The unit features a large flanged input for secure motor connectivity and a splined output shaft engineered to transmit high torque efficiently.

Technical Specifications

Design Features

- Robust blue protective casing
- Large flanged input connection
- High-torque splined output shaft

Performance Focus

High Torque • Industrial Grade • Precision Engineering

Primary Application

Metal Forming, Casting, Forging
