

Industrial Generator Set

This industrial generator set features a substantial generator coupled to a smaller motor, both mounted on a heavy-duty steel frame. The entire assembly is designed for high-power applications in industrial settings.

Overview

Industrial Power Generation Solution

This industrial generator set is engineered for high-power applications in demanding industrial environments. Featuring a robust construction mounted on a heavy-duty steel frame, the unit is built for durability and reliable performance. The assembly includes a primary generator coupled with an auxiliary motor, making it a versatile solution for critical power needs.

Technical Specifications

Design Features

- Ventilation openings for thermal management
- Weathered industrial finish
- Integrated motor-generator coupling

Best For

Industrial Use • High-Power Applications

Construction

Heavy-duty steel frame assembly

Configuration

Main Generator, Auxiliary Motor, Shaft-coupled
