

# Industrial Grade Metal Wire

This metallic wire is suited for diverse industrial and construction tasks. It can be employed in fencing, reinforcement, electrical wiring, and crafting.

## Product Overview

### Industrial Grade Metal Wire

This industrial grade metal wire is engineered for high-strength applications across various sectors, including construction, fencing, and electrical infrastructure. Its uncoated surface profile ensures optimal versatility, providing the necessary durability and conductivity for professional industrial projects. Designed for reliability, this product is suitable for both structural reinforcement and specialized manufacturing needs.

## Technical Specifications

### Status

Industrial Grade • Raw Material

### Material Characteristics

Uncoated Alloy, High Conductivity, High Tensile Strength

## Application Data

### Typical Applications

- Construction reinforcement
- Fencing and perimeter security
- Electrical wiring systems
- Industrial crafting and fabrication
