

Industrial Grinding Machine for Fine Powders

This industrial grinding machine efficiently processes materials into fine powders. It incorporates a multi-stage system featuring a cyclone separator, dust collector, and grinding chamber for optimal performance.

Overview

High-Efficiency Fine Powder Processing

The ACM-15D is a robust industrial grinding machine engineered for precise fine powder processing. It features an integrated multi-stage system, including a cyclone separator, a dedicated dust collector, and a high-performance grinding chamber. Designed for continuous operation, this machine offers reliable control over particle size distribution, making it suitable for a wide range of industrial materials.

Technical Specifications

Integrated Components

- Feeding Hopper
- Grinding Mechanism
- Cyclone Separator
- Dust Collector
- Discharge Outlet

Construction

Robust Motor • Durable Construction

Operational Capabilities

Continuous Operation, Fine Powder Processing, Adjustable Particle Size, Industrial Grade
