

Industrial Heat Exchanger Unit

This unit is designed for efficient thermal management in various applications. It is suitable for use in HVAC systems, industrial processes, and other heating or cooling applications.

Overview

Industrial Heat Exchanger Unit

This industrial-grade tube and shell heat exchanger is designed for high-efficiency thermal management across various applications, including HVAC systems and industrial processes. With a versatile capacity range, it is perfectly suited for heating pools, spas, and hot tubs. The unit features robust construction, ensuring reliable operation and durability in demanding environments.

Performance Specifications

Capacity Range

45000 BTU

Minimum Capacity

1000000 BTU

Maximum Capacity

Technical Details

Series

S SERIES

Exchanger Type

Tube & Shell

Applications

Primary Applications

HVAC Systems, Industrial Processes, Pool Heating, Spa Heating, Hot Tub Heating
