

Industrial Heating Cable with Temperature Sensor

This industrial heating cable provides controlled heat for various applications. It includes a temperature sensor to monitor and maintain optimal operating temperatures.

Product Overview

Industrial Heating Cable Solution

This industrial-grade heating cable is engineered for reliable temperature regulation in demanding environments, such as petroleum and heavy machinery applications. It features an integrated temperature sensor and control unit, ensuring precise thermal management and safe operation. The system includes a standard power connection, making it ready for integration into existing infrastructure where consistent heat is required.

Technical Specifications

Included Components

- Heating cable
- Temperature sensor
- Integrated thermostat/controller
- Power cord with UK-style plug

Power Connection	UK-style plug
Key Features	Temperature Sensing, Industrial Grade, Integrated Control
