

Industrial Heating Element

This component is designed for efficient and reliable heat transfer in industrial settings. It is suitable for use in ovens, dryers, and other heat exchange systems.

Product Overview

Industrial Heating Element AM-011

The AM-011 industrial heating element is a high-performance component engineered for demanding thermal applications. Featuring a reflective surface for optimized heat distribution and a robust cast-metal backing, it provides both structural integrity and efficient heat dissipation. This unit is designed for reliable integration into industrial ovens, dryers, and heat exchange systems.

Technical Specifications

Typical Applications

- Industrial ovens
- Commercial dryers
- Heat exchange systems

Model Number	AM-011
Construction Features	Cast-metal backing, Reflective surface, Integrated mounting points
