

Industrial Internal Combustion Engine

This industrial engine is designed for heavy-duty applications. It features a vertical air intake with a large air filter assembly and a cooling system with a radiator.

Overview

Industrial Performance

This industrial internal combustion engine is engineered for heavy-duty applications, prioritizing durability and consistent power output. Constructed with a robust cast iron engine block, it is built to withstand demanding operational environments. The system includes an integrated cooling solution with a radiator and advanced air filtration, ensuring reliable performance and clean combustion for various industrial machinery.

Construction & Design

Engine Block Material	Cast Iron
Air Intake Configuration	Vertical

Technical Features

Filtration

- Large Air Filter Assembly
- Fuel Filters

Cooling Components	Radiator, Plumbing Assembly
--------------------	-----------------------------

Application

Ideal Use Cases

Heavy-duty Machinery • Industrial Equipment • Stationary Power
