

Industrial Internal Combustion Engine

This is a general-purpose motor and engine used in machinery or industrial applications. It features a radiator for cooling and a fuel filter.

Product Overview

Industrial Power Solution

This high-performance industrial internal combustion engine is engineered for reliable power generation and mechanical drive applications. Featuring a robust multi-cylinder configuration and an integrated cooling radiator, it is designed for sustained operation in demanding industrial environments. The unit comes pre-mounted on a stable base, ensuring ease of installation and integration into existing machinery setups.

Technical Specifications

Key Components

- Multi-cylinder configuration
- Integrated fuel filtration system
- Heavy-duty cooling radiator
- Industrial base frame

Cooling System	Integrated radiator cooling
