

Industrial Machine for Garment, Shoe, and Accessory Production

This industrial machine is designed for use in garment, shoe, and accessory production. The adjustable arm provides support for materials during processing.

Overview

Industrial Production Solution

This industrial machine is engineered specifically for the demanding environments of garment, shoe, and accessory manufacturing. Featuring a robust white cabinet and an adjustable support arm, it provides the stability and flexibility required for precise material processing. Integrated pneumatic components ensure reliable operation, making it a versatile asset for various textile and apparel production applications.

Technical Details

Model Number	LWF 1000/120
System Components	Pneumatic System, Adjustable Support Arm

Application

Industry Applications

- Garment Manufacturing
- Shoe Production
- Accessory Fabrication
- Textile Processing
