Industrial Machine Tool

This is an industrial machine tool used in manufacturing and production. It is designed for various machining operations.

Overview

High-Performance Industrial Series

The 3GN series industrial machine tool is engineered for robust performance in demanding operational environments. Designed with a durable metal construction and integrated cooling fins, this unit ensures efficient thermal management and longevity. It features a standardized flanged inlet and outlet configuration, making it a versatile component for various industrial pumping or compression applications.

Technical Specifications

Cooling Features
Integrated Cooling Fins

Series Name	3GN
Material	Industrial Metal
Connection Type	Flanged Inlet/Outlet
