

# Industrial Metal Forming Machine

This heavy-duty machine is designed for forming metal materials in industrial settings. It utilizes rollers and hydraulic systems to shape metal into the desired forms.

## Overview

### Industrial Metal Forming Capability

This heavy-duty industrial machine tool is engineered for precision metal forming and rolling applications. Featuring a robust, reinforced frame and integrated hydraulic systems, it is designed for demanding industrial environments. The machine includes advanced adjustment mechanisms and safety features to ensure consistent performance and operational reliability.

## Technical Specifications

### Key Systems

- Hydraulic systems
- Mechanical rollers
- Adjustment mechanisms
- Integrated safety features

Construction	Heavy-duty industrial frame
Application	Metal Forming, Rolling, Industrial Processing

## Operational Details

### Safety Features

Integrated Safety • Industrial Grade
