

Industrial Metal Scaffold Frame

This sturdy metal frame provides a stable structure for scaffolding systems. Constructed from tubular steel with a triangular base, it offers reliable support and multiple horizontal bars for climbing.

Product Overview

Industrial-Grade Scaffolding

This industrial metal scaffold frame is engineered for heavy-duty construction and maintenance applications. Constructed from high-strength tubular steel, the frame provides a robust support system with multiple integrated climbing points. Its stable triangular base design ensures safety and reliability during high-elevation work, making it an essential component for professional job sites.

Technical Details

Key Features

- High-strength tubular steel construction
- Triangular base for enhanced stability
- Multiple horizontal support/climbing bars

Material	Tubular Steel
Design Type	Triangular Base Frame
Common Applications	Construction, Industrial Maintenance, Scaffolding Systems
