

Industrial Metalworking Machine

This industrial metalworking machine is designed for shaping and cutting metal materials. It features a robust frame and a control panel for programming and monitoring operations.

Overview

Industrial-Grade Metalworking Solution

This robust industrial machine is engineered for precision metalworking tasks, featuring a heavy-duty steel frame designed for long-term durability in demanding workshop environments. Equipped with a vertical spindle configuration and an integrated control panel, it offers operators precise command over complex cutting and milling operations. The inclusion of a protective yellow safety guard ensures a secure work area by effectively containing debris and coolant during high-speed production.

Technical Specifications

Spindle Configuration	Vertical
Frame Material	Heavy-duty steel
Safety Features	Protective Guarding, Debris Containment, Coolant Shielding

Operational Features

Color Scheme	Green • Yellow
Control System	Yes
