

Industrial Meter Reading Terminal

This meter reading terminal is designed for industrial applications. It is suitable for remote or automated meter reading in utilities, manufacturing, or building management systems.

Product Overview

Industrial Meter Reading Terminal

The Industrial Meter Reading Terminal (Model DC8-99) is a specialized device designed for automated and remote data collection in industrial environments. Engineered for reliability, this unit facilitates efficient meter data transmission, making it an essential component for utility management, manufacturing facilities, and building automation systems. Its robust design ensures consistent performance in demanding operational settings.

Technical Specifications

Model Number	DC8-99
Device Type	Meter Reading Terminal
Application	Industrial, Utility Management, Building Automation
