

# Industrial Mold Development System

This industrial mold development system is designed for precise material dispensing in molding processes. It features multiple overhead hoppers, each connected to a dispensing mechanism supported by a steel frame.

## System Overview

### Industrial Mold Development System

This industrial-grade mold development system is engineered for high-precision material handling and dispensing tasks. Featuring a robust steel frame construction, the system integrates multiple overhead hoppers with conical bottoms to ensure efficient material flow. Designed for industrial environments, this equipment provides a stable and reliable solution for filling molds or containers with consistency and control.

**Frame Color**

Yellow

**Frame Material**

Painted Steel

## Technical Specifications

**Hopper Configuration**

Multiple overhead hoppers with conical bottoms

**Primary Application**

Mold Filling, Material Dispensing, Industrial Processing
