

Industrial Mould Component with Foot Pedal

This is an industrial mould component used in manufacturing processes. It features a foot pedal control mechanism connected to a motor for automated operation.

Product Overview

Industrial Moulding Solution

This industrial mould component is engineered for reliability and high-frequency use in demanding manufacturing environments. Featuring an integrated foot pedal control mechanism, it allows for seamless hands-free operation, enhancing workflow efficiency and control during production cycles. Built from durable materials, this component is designed to withstand the rigors of repeated industrial application.

Technical Specifications

Model Identifier	SKT-104
Operation Mode	Foot-pedal controlled automation
Application Suitability	Industrial Manufacturing, Moulding Processes, Automated Production
