

Industrial Oil Press for Seeds and Nuts

This industrial oil press is engineered for efficient oil extraction from seeds and nuts. Its robust design includes a heating system to optimize yield and a filtration system to enhance oil quality.

Product Overview

Industrial Oil Extraction Solution

This industrial oil press is engineered for high-efficiency extraction from a wide variety of seeds and nuts. Built with a robust frame and a powerful motor, it is designed for reliable, continuous operation in small to medium-scale production environments. The unit integrates advanced heating and filtration systems to ensure optimal oil yield and superior product quality.

Key Features

Operational Features

- Continuous operation capability
- Integrated heating system for yield optimization
- Built-in filtration system
- Robust industrial-grade frame

Suitable Applications

Oil extraction, Seed processing, Nut processing, Small-scale production, Medium-scale production

Technical Specifications

Pressing Chamber

Large capacity industrial chamber
