

Industrial Oil Seal

Industrial oil seals prevent the leakage of lubricants and contaminants in rotating machinery. These seals are made from durable materials like rubber and nitrile for resistance to wear, heat, and chemical degradation.

Product Overview

Industrial Oil Seal

These high-quality oil seals are designed for various industrial applications, engineered to prevent the leakage of lubricants, fluids, and other contaminants in rotating or reciprocating machinery. Constructed from durable materials like rubber and nitrile, they offer excellent resistance to wear, heat, and chemical degradation. They are ideal for use in engines, pumps, gearboxes, and other mechanical systems.

Technical Specifications

Key Features

- Prevents lubricant leakage
- Blocks external contaminants
- High heat resistance
- Chemical degradation resistance
- Wear resistant

Material Composition

Rubber, Nitrile

Application Suitability

Common Applications

Engines • Pumps • Gearboxes • Rotating Machinery • Reciprocating Machinery
