

Industrial Ozone Generator for Water and Air Treatment

This industrial ozone generator is designed for large-scale applications. It features a stainless steel horizontal cylindrical pressure vessel with hemispherical end caps, along with associated piping, valves, and a control panel.

Product Overview

High-Capacity Industrial Ozone Generation

This industrial-grade ozone generator is engineered for demanding large-scale applications, including municipal water treatment, air purification, and complex industrial oxidation processes. Constructed with a durable stainless steel horizontal cylindrical pressure vessel, it ensures long-term operational reliability and corrosion resistance. Designed for heavy-duty performance, this unit integrates seamlessly into existing infrastructure to provide efficient and consistent ozone output.

Technical Specifications

Ozone Output Capacity

20 KG

Ozone Output

Category	Large Ozone Generator
Reference Number	100036

Construction & Design

Material

Stainless Steel

Vessel Configuration	Horizontal cylindrical pressure vessel with hemispherical end caps
----------------------	--

Applications

Primary Applications

- Water Treatment
- Air Purification
- Industrial Oxidation Processes
