

Industrial Paper Production System

This system is engineered for paper processing applications. It features interconnected tanks and a central tower for managing liquid storage and transfer.

Overview

Industrial Paper Production System

This large-scale industrial paper production system is designed for high-capacity liquid storage and transfer, essential for complex paper manufacturing processes. The facility features a robust architecture with dual circular tanks supported by reinforced concrete pillars, ensuring stability and durability. Integrated metal walkways and central towers facilitate easy access for maintenance and operations, while the direct connection to railway infrastructure optimizes logistics and material transport.

Infrastructure & Design

Tank Configuration	Dual circular tanks
Support Structure	Reinforced concrete pillars

Logistics

Logistics Connectivity	Railway Access, Industrial Network
------------------------	------------------------------------

Operational Features

Maintenance Access

- Metal connecting walkways
- Central access tower
