

Industrial Parts Cleaning Machine with Conveyor System

This industrial cleaning machine features an overhead conveyor system for continuous parts processing. It is constructed with multiple enclosed cleaning stations for washing, rinsing, and drying components.

Overview

Automated Industrial Cleaning Solution

This industrial cleaning machine is engineered for high-volume, continuous processing of components using an integrated overhead conveyor system. Constructed from corrosion-resistant materials, it features multiple enclosed chambers designed to handle complex cleaning cycles including washing, rinsing, and drying. This automated system is ideal for manufacturing environments requiring consistent, high-standard part cleanliness.

Technical Specifications

Cleaning Stages

- Washing
- Rinsing
- Drying

Application

Industrial • Automated • Continuous Processing

Construction Material

Stainless Steel

Conveyor System

Overhead Continuous Conveyor
