

Industrial Parts Cleaning Machine with Hoist System

This industrial cleaning machine is designed for heavy-duty parts cleaning. It features a large chamber, a hoist system, and a filtration system to maintain cleaning solution quality.

Product Overview

Heavy-Duty Industrial Cleaning Solution

This industrial cleaning machine is engineered for the rigorous demands of heavy-duty parts maintenance. Equipped with an integrated hoist system, it facilitates the efficient loading and unloading of oversized components such as engine blocks and large castings. The system utilizes high-pressure spray technology to ensure thorough contaminant removal, while an advanced filtration system maintains the integrity and longevity of the cleaning solution.

Key Features

Core Capabilities

- Integrated hoist system for heavy lifting
- High-pressure spray nozzle cleaning technology
- Advanced filtration system for solution maintenance
- Large capacity chamber for oversized components

Suitable Applications

Engine Blocks, Large Castings, Industrial Components

Construction

Durability

Heavy-Duty Construction • Industrial Grade
