

Industrial Parts Washing Machine

This industrial parts washing machine is engineered for cleaning parts in industrial applications. It features a multi-tube heat exchanger, control panel, multiple tanks, and a pump system.

Overview

Industrial Cleaning Performance

This industrial parts washing machine is engineered for high-efficiency cleaning applications in demanding manufacturing environments. Featuring a robust stainless steel construction, it incorporates a multi-tube heat exchanger and a sophisticated interconnected piping system to ensure consistent cleaning results. The integrated pump system and multi-tank configuration provide the versatility required for various industrial cleaning tasks.

Technical Specifications

Key Components

- Multi-tube heat exchanger
- Control panel with indicator lights
- Interconnected piping system
- Multi-tank system
- Pump system

Material	Stainless Steel
Frame Design	Mounted frame system

Operational Features

Interface

Control Panel • Indicator Lights
