

Industrial Pellet Roasting Production Line

This production line is designed for roasting pellets on a large scale. It utilizes a belt system to process up to 1.4 million tons of pellets annually.

Overview

Industrial Pellet Roasting System

This industrial-scale belt pellet roasting production line is designed for high-capacity material processing. Originally engineered and commissioned in 2010, the system represents a significant milestone in large-scale belt roasting technology. It is built to handle substantial throughput requirements for industrial pellet operations.

Technical Specifications

Process Type

Belt Roasting • Industrial Pellet Production

Annual Production Capacity	1.4 million t/a
Commissioning Date	August 2010
Design Year	2008
