

Industrial Pipe Flange

This circular metal flange is designed for industrial applications requiring secure connections. It is made from durable material and features pre-drilled holes for easy installation in oil and gas, chemical processing, and manufacturing industries.

Product Overview

Industrial Pipe Flange

This industrial pipe flange is engineered for high-performance piping systems, providing a robust connection point for valves, pumps, and equipment. Designed to withstand demanding high-pressure and high-temperature environments, it features a durable construction with a raised ring and supporting bars for superior stability. Pre-drilled holes ensure efficient installation and secure fastening, making it an ideal component for critical infrastructure in the oil and gas, chemical processing, and manufacturing sectors.

Technical Specifications

Design Features

- Robust circular metal construction
- Raised ring design for enhanced sealing
- Integrated supporting bars for stability
- Pre-drilled mounting holes

Performance Capabilities

High Pressure Resistant • High Temperature Resistant

Suitable Industries

Oil and Gas, Chemical Processing, Manufacturing
