

# Industrial Plant Setup

This industrial plant setup features a multi-level structure with silos, conveyors, and processing units. A cylindrical tank is included for storage.

## Overview

### Integrated Industrial Processing Plant

This industrial plant setup offers a comprehensive, multi-level solution designed for efficient material processing and storage. The integrated facility features advanced components including specialized storage tanks, material handling systems, and automated weighing mechanisms. Engineered for high-capacity operations, this system ensures seamless material flow from initial handling to finished product storage.

## Key Components

### Included System Components

- Filter Bags
- Weighing Hopper
- Bitumen Tank
- Finished Storage Silos
- Hot Aggregate Elevator
- Oil Tank

## System Capabilities

### Process Features

Material Handling, Storage Solutions, Automated Weighing, Industrial Processing
