

Industrial Plastic Distribution Manifold

This industrial plastic distribution manifold is designed with a circular configuration and multiple hose connections. It is engineered for distributing fluids or gases within the plastics or rubber industry.

Product Overview

Industrial Distribution Manifold

This industrial distribution manifold is engineered for the precise delivery of fluids or gases within complex manufacturing environments. Designed with a robust circular architecture, it facilitates efficient connection across multiple hose lines, ensuring consistent flow management. Its durable construction makes it an ideal component for demanding applications in the plastics and rubber processing industries.

Technical Specifications

Construction Material

Industrial Grade Metal

Design Configuration

Circular distribution manifold

Connection Capability

Multi-hose symmetric arrangement

Application

Industry Suitability

Plastics Processing, Rubber Manufacturing, Fluid Distribution, Gas Distribution
